

Linabond® Partial Project History

Protection - Containment - Structural Rehabilitation

Please understand that this is only a very small sampling of projects over a 30 year period of time. It would be virtually impossible to list and document every project in Linabond's long history in water and wastewater. It is intended to show the variety and versatility of Linabond® Systems rather than a comprehensive listing of all Linabond® projects.

Linabond® is one of the oldest suppliers of Lining Systems for water and wastewater in the world, with well over a quarter of a century of project history. This pictorial documentation contains examples of the various types of projects Linabond have been involved with since 1981. Much of the testing, research and development of Co-Lining® Systems took place during the 1970's. More projects will be added to this overview as time and space allow. For more specific video documentation, please see the additional project profiles in the video catalog in the Project Examples page of this website.
